Table 4 * ITU-T G.652.D attributes

| Fibre attributes |  |  |
| :---: | :---: | :---: |
| Attribute | Detail | Value |
| Mode field diameter | Wavelength | 1310 nm |
|  | Range of nominal values | $8.6-9.5 \mu \mathrm{~m}$ |
|  | Tolerance | $\pm 0.6 \mu \mathrm{~m}$ |
| Cladding diameter | Nominal | $125.0 \mu \mathrm{~m}$ |
|  | Tolerance | $\pm 1 \mu \mathrm{~m}$ |
| Core concentricity error | Maximum | $0.6 \mu \mathrm{~m}$ |
| Cladding noncircularity | Maximum | 1.0\% |
| Cable cut-off wavelength | Maximum | 1260 nm |
| Macrobend loss | Radius | 30 mm |
|  | Number of turns | 100 |
|  | Maximum at 1625 nm | 0.1 dB |
| Proof stress | Minimum | 0.69 GPa |
| Chromatic dispersion coefficient | $\lambda_{\text {omin }}$ | 1300 nm |
|  | $\lambda_{0 \text { max }}$ | 1324 nm |
|  | $S_{\text {Omax }}$ | $0.092 \mathrm{ps} / \mathrm{nm}^{2} \times \mathrm{km}$ |
| Cable attributes |  |  |
| Attribute | Detail | Value |
| Attenuation coefficient (Note 1) | Maximum from 1310 nm to 1625 nm (Note 2) | $0.4 \mathrm{~dB} / \mathrm{km}$ |
|  | Maximum at 1383 nm $\pm 3 \mathrm{~nm}$ (Note 3) | $0.4 \mathrm{~dB} / \mathrm{km}$ |
|  | Maximum at 1550 nm | $0.3 \mathrm{~dB} / \mathrm{km}$ |
| PMD coefficient (Note 4) | M | 20 cables |
|  | Q | 0.01\% |
|  | Maximum $\mathrm{PMD}_{\mathrm{Q}}$ | $0.20 \mathrm{ps} / \sqrt{\mathrm{km}}$ |

NOTE 1 - The attenuation coefficient values listed in this table should not be applied to short cables such as jumper cables, indoor cables and drop cables. For example, [IEC 60794-2-11] specifies the attenuation coefficient of indoor cable as $1.0 \mathrm{~dB} / \mathrm{km}$ or less at both 1310 and 1550 nm .
NOTE 2 - This wavelength region can be extended to 1260 nm by adding $0.07 \mathrm{~dB} / \mathrm{km}$ induced Rayleigh scattering loss to the attenuation value at 1310 nm . In this case, the cable cut-off wavelength should not exceed 1250 nm .
NOTE 3 - The average attenuation coefficient at this wavelength shall be less than or equal to the maximum value specified for the range of 1310 nm to 1625 nm , after hydrogen ageing. The hydrogen ageing is a type test that shall be done to a sampled fibre, according to [IEC 60793-2-50] regarding the B1.3 fibre category.
NOTE 4 - According to clause 6.2, a maximum $\mathrm{PMD}_{\mathrm{Q}}$ value on uncabled fibre is specified in order to support the primary requirement on cable $P_{M D}$.
